DATE MAILED: 12/21/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/414,307	Applicant(s) RITTER ET AL.	
	Examiner Shawn S. An	Art Unit 2613	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 December 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-29 and 33-44 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 26-29 and 33-44 is/are allowed.
- 6) ☒ Claim(s) 1-25 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Remarks

1. Applicants' arguments with respect to currently pending claims have been carefully reviewed but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-6, 10-15, 18, and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicants' admitted prior art in view of Dischert et al (4,191,971) and Takashimizu et al (6,549,243 B1).

Regarding claims 1, 6, 10, and 15, Applicants' admitted prior art discloses an apparatus for receiving video signals from video cameras, comprising:

a multiplexer (Fig. 1, 108) for selecting a camera video signal from a plurality of video cameras; and

a video decoder coupled to the selector (110) for receiving a selected one of the plurality of video signals.

Applicants' admitted prior art discloses all of the claimed limitations with the exception of a controller coupled to the video decoder for conditioning the video decoder according to a previously stored parameter representative of the selected one of the video signals.

However, Dischert et al teaches a system for connecting a plurality of video signals comprising a controller (19 or 219 or 27) coupled to a video decoder (21b or

Art Unit: 2613

221b) for conditioning the video decoder according to a previously stored parameter (set up adjustment prior to operational mode) video signals (col. 2, lines 5-9; col. 2, lines 46-48).

Furthermore, Takashimizu et al teaches a selector/multiplexer (Fig. 1, 5), a video decoder (11) coupled to the selector (5) for receiving a selected one (isolated from other signals) of the plurality of video signals (col. 3, lines 27-30), and a controller (6) coupled to the video decoder (11) for conditioning the video decoder according to a previously stored parameter (selecting optional or fixed parameter of video signals) representative of the selected one of the video signals (abs.; col. 5, lines 11-34)

Therefore, it would have been obvious to a person of ordinary skill in the relevant art employing apparatus/method for receiving video signals from video cameras as taught by Applicants' admitted prior art to incorporate both the Dischert et al and Takashimizu et al's teachings as above so that the controller is coupled to the Applicants' admitted prior art's video decoder for conditioning the video decoder according to a previously stored parameter representative of the selected one of the video signals, thereby improving each video (display) picture quality corresponding to the selected camera.

Regarding claims 2-3 and 11-12, Dischert et al discloses a memory device (RAM) for storing parameter in a storage location (col. 3, lines 10-45).

Regarding claims 4 and 13, Dischert et al discloses the parameter being a selected one of a plurality of stored parameters (col. 2, lines 46-48).

Regarding claims 5 and 14, Dischert et al discloses the parameter being obtained from the video decoder (col. 3, lines 40-41).

Regarding claim 18, the Examiner takes official notice that it is well known in the relevant art for such device as a genlock block to perform a horizontal phase of video signal for synchronizing the timing.

Therefore, it would have been obvious to a person of ordinary skill in the relevant art employing apparatus/method for receiving video signals from video cameras as taught by Applicants' admitted prior art to incorporate the conventionally well known

Art Unit: 2613

concept of horizontal phase for enhancing quality of the specific needs of the individual camera.

Regarding claim 22, Dischert et al discloses gain level for the video signal (col. 2, lines 5-6).

4. Claims 7 and (16-17, 23) are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicants' admitted prior art, Dischert et al, and Takashimizu et al as applied to claims 1 and 10 above, respectively, and further in view of Cooper et al (5,870,139).

Regarding claims 7 and 16, the combination of Applicants' admitted prior art, Dischert et al, and Takashimizu et al does not specifically disclose horizontal frequency of video signal.

However, Cooper et al discloses a horizontal frequency (231b) of video signal.

Therefore, it would have been obvious to a person of ordinary skill in the relevant art employing apparatus/method for receiving video signals from video cameras as taught by Applicants' admitted prior art to incorporate the conventional camera parameter such as horizontal frequency as taught by Cooper et al for enhancing quality of the specific needs of the individual camera.

Regarding claim 17, it is well known in the art for such device as a genlock block to perform a horizontal phase of video signal for synchronizing the timing.

Therefore, it would have been obvious to a person of ordinary skill in the relevant art employing apparatus/method for receiving video signals from video cameras as taught by Applicants' admitted prior art to incorporate the conventionally well known concept of horizontal phase for enhancing quality of the specific needs of the individual camera.

Regarding claim 23, the combination of Applicants' admitted prior art and Dischert et al does not specifically disclose dc clamping of video signal.

However, Cooper et al discloses dc clamping level (250) of video signal.

Therefore, it would have been obvious to a person of ordinary skill in the relevant art employing apparatus/method for receiving video signals from video cameras as

Art Unit: 2613

taught by Applicants' admitted prior art to incorporate the conventional camera parameter such as dc clamping as taught by Cooper et al for enhancing quality of the specific needs of the individual camera.

5. Claims 8-9 and 24-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicants' admitted prior art, Dischert et al, and Takashimizu et al as applied to claims 1 and 10 above, respectively, and further in view of Vincent (5,436,659).

Regarding claims 8 and 24, the combination of Applicants' admitted prior art, Dischert et al, and Takashimizu et al fails to disclose the decoder comprising a genlock block.

However, Vincent teaches a conventional genlock block (Fig. 2A, 100) for synchronizing the timing generated by ASIC to an image signal from an external source such as a video camera.

Therefore, it would have been obvious to a person of ordinary skill in the relevant art employing an apparatus/method for receiving video signals from video cameras as taught by Applicants' admitted prior art to incorporate the conventional concept of genlock block as taught by Vincent for synchronizing the timing generated by an image signal from a video camera.

Regarding claims 9 and 25, Vincent discloses ADC (Fig. 1, 24) for converting video signals into a series of digital samples and performing sampling according to pulses received from the timing generator (18).

6. Claims 19-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicants' admitted prior art, Dischert et al, and Takashimizu et al as applied to claim 10 above, and further in view of Holmes (4,167,021).

Regarding claims 19-21, the combination of Applicants' admitted prior art, Dischert et al, and Takashimizu et al does not specifically disclose chrominance frequency and chrominance phase of the video signal.

However, Holmes teaches conventionally well known chrominance frequency and chrominance phase of the video signal (abs.; Fig. 1, 12) for improving the quality of color video signals.

Therefore, it would have been obvious to a person of ordinary skill in the relevant art employing an apparatus/method for receiving video signals from video cameras as taught by Applicants' admitted prior art to incorporate the conventional concept of as chrominance frequency and phase of the video signal as taught by Holmes for improving the quality of color of video signals.

Allowable Subject Matter

7. Claims 26-29 and 33-44 allowed.
8. Claims 26-29 and 33-44 comprise the novel features as discussed in the last Official action, wherein the art of record fails to anticipate or make obvious the novel features.

Conclusion

9. Applicant's previous amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a). A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

10. Any inquiry concerning this communication or earlier communications from the Examiner should be directed to *Shawn S. An* whose telephone number is 571-272-7324.
11. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
12. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
